

PRODUCT ARTICLE MASTER

Würth Business Services easily manages thousands of articles and arranges them into the Würth Group hierarchy. Along with arranging articles, we manage end-to-end article-related tasks accurately and diligently. We ensure that the article master data is consistent, complete, and updated.

ARTICLE CREATION

Article Creation is a process of creating a new article number if a similar article is not found in the ERP system. For creating a new article number, the data related to article description, attributes, specifications sheet, and others is required. This data is availed and uploaded in the ERP system.

PROCESS FLOW AT WÜRTH BUSINESS SERVICES:

- **Step 1:** Checking for similar articles in ERP system
- **Step 2:** Creating a S-tool project with article description, attributes, documents (specifications, drawing, and others), and others
- **Step 3:** Releasing the project for approval to the C-department
- **Step 4:** Releasing the project to the sourcing team after the approval

BENEFITS:

- Quote the current market price to the customer
- Avoid data duplication
- Ensure standardisation
